

Don't leave park homes out in the cold

Everyone should be able to live in a warm home.

But there are over 100,000 older people across England and Wales living in park homes, which are often poorly insulated and freezing cold in winter. Government schemes to improve the energy efficiency of homes are failing park home residents.

Age UK is calling on the Government to roll out a specific energy efficiency scheme for people living in park homes. Please show your support – sign our petition.
